

ASBESTOS IN JOHNSON & STARLEY HEATERS AND BUILDINGS

Asbestos can be found in any industrial or residential building that was built or refurbished before the year 2000. It was in many of the common materials used in the building trade such as,

- Loose asbestos in ceiling or floor cavity
- Lagging
- Sprayed coatings on ceilings, walls and beams/columns
- Asbestos insulating board (Fire proof compartment lining)
- Floor tiles, textiles and composites
- Textured coatings (Artex)
- Asbestos cement products (Gas boiler Flues)
- Roofing felt
- Rope seals and gaskets

Up until 1985, when their use was prohibited, many domestic products also contained brown and blue asbestos materials (the most dangerous forms)

If asbestos materials are in good condition, and in a place where they are unlikely to be disturbed, then they should not cause any harm. It is only when the materials are damaged or disturbed, so that fibres are released, that asbestos can become a danger.

The table below lists Johnson and Starley products that contained Asbestos materials within their manufacture. Any units not on the list will not themselves contain asbestos materials, but materials used as part of their installation might.

Johnson and Starley were the manufacturer of the unit only, and therefore cannot give any definitive information regarding the use of asbestos containing materials as part of the installation.

For further information and advice on asbestos, contact

<http://www.hse.gov.uk/asbestos/>

Notes:		Key to Components that contain asbestos (where known)		
1. This table cannot be considered to be a definitive list. Any material you suspect as asbestos should be treated as such. 2. It is understood that Johnson & Starley warm air heaters with beige cases do not contain asbestos.		CI =	Insulation in electric cable	
		G =	Gaskets	
		I =	Insulation	
		MF =	Mastic containing fibres	
		R =	Rope	
		SW =	Sealing washers
